

Camels

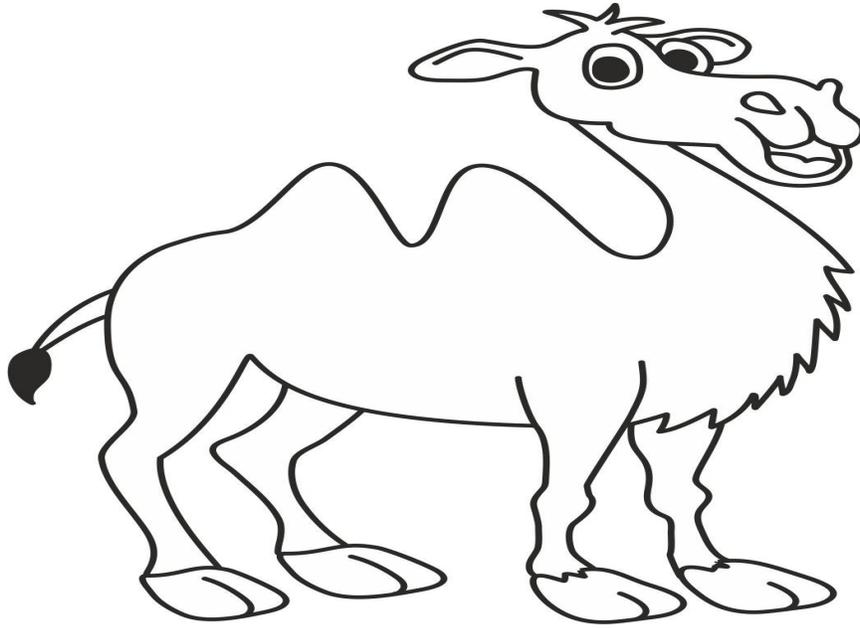

Camels can have one or two humps. Their humps are made of fat.

Camels like the sun. They have many sets of eyelashes. Each lash keeps the sun from their eyes. On their feet, camels have thick pads. They can step on hot sand.

Camels like to eat many different plants. Their lips are very thick. They can eat plants with spikes.

Camels can walk many miles. Sometimes they can walk 100 miles at once. On long trips, they do not need water. A camel can keep enough water in its body. When a camel does drink water, he drinks a lot. A camel can drink 430 cups of water at one time!

People ride camels to get from one spot to another. Would you like to ride a camel?

Camels (Teacher Version)
